

Amendments to the Specification:

Please amend the following paragraphs of the Specification as indicated below:

[0014] The upper body 22 has a first or lower annular flux collector 38 received in contact thereon with a lower annular flange 40 of a bobbin 42 received concentrically on flux collector 38 in concentric arrangement therewith and having a coil 44 of electrically conductive material wound thereon. If desired, an annular locating rib 46 may be provided on the axial face of the bobbin flange 40 and received in a groove 48 formed in the flux collector 38 for positioning and locating the bobbin with respect thereto.

[0019] A spring ~~74~~73 is provided between the armature 50 and the lower end of pole piece 72 for biasing the armature in a downward position to cause the rod 52 to urge ball valve 26 into contact with lower valve seat 18.
